1 INTRODUCTION

Phthalates act as softeners and are commonly used as plasticizers in PVC. Phthalates may migrate fairly easily from PVC into the environment. Because phthalates appeared to have negative effects on health and the environment, regulations have been set up.

The manufacture and import of toys into the EC is regulated by the European Union's Toy Directive 88/378, with in addition the general product safety, which is covered by EU directive 2001/95 and Council Directive + amendments 76/769/EEC. These regulations govern conditions related to toys intended for children under 36 months of age (this group often suck or chew on toys and phthalates migrate easily). Therefore plastic toys are not allowed to contain either more than 0.1 %M/M of DEHP, DBP and BBP combined or more than 0.1%M/M of DINP (3 mixtures, ref. 21), DIDP (2 mixtures, ref 22) and DNOP combined.

|---|-------------------|----------------------|
| • bis(2-ethylhexyl)phthalate (DEHP) ¹⁾ | CASno. 117-81-7 | EINECS no. 204-211-0 |
| • dibutylphthalate (DBP) | CASno. 84-74-2 | EINECS no. 201-557-4 |
| • benzylbutylphthalate (BBP) | CASno. 85-68-7 | EINECS no. 201-622-7 |
| • di-isobutylphthalate (DINP-1) | CASno. 28553-12-0 | EINECS no. 249-079-5 |
| • di-isobutylphthalate (DINP-2) | CASno. 68515-48-0 | EINECS no. 271-090-9 |
| • di-isobutylphthalate (DINP-3) | CASno. 28552-12-0 | EINECS no. 249-079-5 |
| • di-isodecylphthalate (DIDP-1) | CASno. 26761-40-0 | EINECS no. 247-977-1 |
| • di-isodecylphthalate (DIDP-2) | CASno. 68515-49-1 | EINECS no. 271-091-4 |
| • di-n-octylphthalate (DNOP) | CASno. 117-84-0 | EINECS no. 204-214-7 |

¹⁾ DEHP is also known as di-(iso)-octylphthalate (DOP).

The determination of phthalates in plastics is known to give problems with the comparability of laboratory results. The fact that phthalates, used in the plastic industry are not pure components, but complex (and overlapping) mixtures is one of the causes for these problems. However, no appropriate PVC reference materials are yet available (ref. 20).

As an alternative, participation in a proficiency test may enable laboratories to check their performance. Therefore, a proficiency test (laboratory-evaluating interlaboratory study) for the determination of phthalates in plastics was again organized by the Institute for Interlaboratory Studies in February 2011.

In the 2011 iis interlaboratory study iis11P01, 124 laboratories in 29 different countries did participate. See appendix 3 for a list of the number of participating laboratories per country. In this report the results of the proficiency test are presented and discussed.

2 SET UP

The Institute for Interlaboratory Studies in Spijkenisse was the organiser of this proficiency test. It was decided to send two different PVC samples. On request also DHP (not banned in the EU) was investigated in this PT. Both PVC materials were prepared by a Chinese factory by addition of technical mixtures of phthalates to PVC and subsequent homogenization. Analyses were subcontracted to an accredited laboratory.

2.1 QUALITY SYSTEM

The Institute for Interlaboratory Studies in Spijkenisse, the Netherlands, has implemented a quality system based on ISO guide 43, ILAC-G13:2007 and ISO17043:2010. This ensures 100% confidentiality of participant's data. Also customer's satisfaction is measured on a regular basis by sending out questionnaires.

2.2 PROTOCOL

The protocol followed in the organisation of this proficiency test was the one as described for proficiency testing in the report 'iis Interlaboratory Studies: Protocol for the Organisation, Statistics and Evaluation' of January 2010 (iis-protocol, version 3.2).

2.3 CONFIDENTIALITY STATEMENT

All data present in this report must be regarded as confidential and for use by the participating companies only. Disclosure of the information in this report is only allowed by means of the entire report. Use of the contents of this report for third parties is only allowed by written permission of the Institute for Interlaboratory Studies. Disclosure of the identity of one or more of the participating companies will be done only after receipt of a written agreement of the companies involved.

2.4 SAMPLES

Two samples were prepared from two different bulk materials.

The first bulk material was a blue coloured PVC, to which small amounts of 3 banned phthalates (2 g BBP, 5 g DEHP and 3 g DINP per kg raw material) were added and, to get the desired plasticity (to easily homogenize), 20-25% of a phthalate that is not banned.

The material was cut into pieces, mixed well, and divided over 150 plastic bags of 3 gram each and labelled #11012.

The homogeneity of the subsamples #11012 was checked by determination of phthalates on 8 stratified randomly selected subsamples.

| | BBP in %M/M | DEHP in %M/M | DINP in %M/M |
|-----------------|-------------|--------------|--------------|
| Sample #11012-1 | 0.204 | 0.499 | 0.354 |
| Sample #11012-2 | 0.197 | 0.477 | 0.337 |
| Sample #11012-3 | 0.202 | 0.488 | 0.328 |
| Sample #11012-4 | 0.203 | 0.487 | 0.331 |
| Sample #11012-5 | 0.209 | 0.500 | 0.367 |
| Sample #11012-6 | 0.212 | 0.515 | 0.371 |
| Sample #11012-7 | 0.206 | 0.492 | 0.374 |
| Sample #11012-8 | 0.204 | 0.489 | 0.355 |

Table 1: results of the homogeneity test on the subsamples #11012

The second bulk material was an orange PVC, to which small, known amounts of 7 different phthalates were added. The material was cut into pieces, mixed well, and homogenized. This material was used as a quality control sample in a testing laboratory already for 6 months and during its use it proved to be sufficiently homogeneous. The bulk material was distributed over 150 plastic bags (3 gram each) and labelled #11013.

| | average in %M/M | st. dev. in %M/M |
|------|-----------------|------------------|
| BBP | 0.15 | 0.004 |
| DBP | 0.19 | 0.008 |
| DHP | 0.10 | 0.004 |
| DEHP | 0.29 | 0.011 |
| DNOP | 0.09 | 0.004 |
| DINP | 0.18 | 0.015 |
| DIDP | 0.29 | 0.027 |

Table 2: results of the use of #11013 as QC sample

From the test results of tables 1 and 2, the repeatabilities were calculated and compared with 0.3 times the corresponding target reproducibility in agreement with the procedure of ISO 13528, Annex B2 in the next table:

| | r (observed) | 0.3*R(ref. method) | reference method |
|----------------|--------------|--------------------|------------------|
| BBP in #11012 | 0.013 | 0.052 | EN14372:04 |
| DEHP in #11012 | 0.032 | 0.124 | EN14372:04 |
| DINP in #11012 | 0.051 | 0.089 | EN14372:04 |
| BBP in #11013 | 0.013 | 0.037 | EN14372:04 |
| DBP in #11013 | 0.021 | 0.047 | EN14372:04 |
| DHP in #11013 | 0.011 | 0.024 | EN14372:04 |
| DEHP in #11013 | 0.030 | 0.074 | EN14372:04 |
| DNOP in #11013 | 0.011 | 0.024 | EN14372:04 |
| DINP in #11013 | 0.042 | 0.046 | EN14372:04 |
| DIDP in #11013 | 0.075 | 0.073 | EN14372:04 |

Table 3: evaluation of repeatabilities of phthalate contents of the subsamples #11012 and #11013

The observed repeatabilities of the results of homogeneity tests were all in good agreement with 0.3 times the estimated EN14372 reproducibilities. Therefore, homogeneity of subsamples #11012 and #11013 was assumed.

To each of the participating laboratories, one sample of approx. 3 grams of sample of #11012 and one sample of approx. 3 grams of sample of #11013 were sent on February 16, 2011.

2.5 ANALYSIS

The participants were requested to determine and report ten individual phthalates (DINP1&2, DBP, BBP, DHP, DIDP1&2, DNOP, DEHP and DiBP) and other phthalates on both samples #11012 and #11013.

The participants were explicitly asked to treat the samples as if they were routine samples and to report the analytical results using the indicated units on the report form and not to round the test results, but report as much significant figures as possible.

The participants were also asked not to report 'less than' results which are above the detection limit, because such results can not be used for meaningful statistical calculations.

To get comparable results a detailed report form, on which the units were prescribed, was sent together with each set of samples. Also a letter of instructions was added to the package.

The laboratories were asked to complete the report form with the requested details of the methods used.

3 RESULTS

During four weeks after sample despatch the results of the individual laboratories were received. The original data are tabulated per sample in the appendix 1 of this report. The laboratories are presented by their code numbers.

Directly after deadline, a reminder fax was sent to those laboratories that did not report results at that moment. Shortly after the deadline the available results were screened for suspect data. A result was called suspect in case the Huber Elimination Rule (a robust outlier test) found it to be an outlier. The laboratories that produced these suspect data were asked to check the results. Additional or corrected results are used for the data analysis and the original results are placed under 'Remarks' in the result tables in appendix 1.

3.1 STATISTICS

For the statistical evaluation the *unrounded* (when available) figures were used instead of the rounded results. Results reported as '<...' or '>...' were not used in the statistical evaluation.

First the normality of the distribution of the various data sets per determination was checked by means of the Lilliefors-test. After removal of outliers, this check was repeated.

Not all data sets proved to have a normal distribution, in which cases the statistical evaluation of the results should be used with due care.

In accordance to ISO 5725 (1986 and 1994) the original results per determination were submitted subsequently to Dixon and Grubbs outlier tests. Outliers are marked by D(0.01) for the Dixon test, by G(0.01) or DG(0.01) for the Grubbs test. Stragglers are marked by D(0.05) for the Dixon test, by G(0.05) or DG(0.05) for the Grubbs test. Both outliers and stragglers were not included in the calculations of averages and standard deviations.

Finally the reproducibilities were calculated from the standard deviations by multiplying them with a factor of 2.8.

Statistical calculations were performed as described in the report 'iis Interlaboratory Studies: Protocol for the Organisation, Statistics and Evaluation' of January 2010 (iis-protocol, version 3.2).

3.2 GRAPHICS

In order to visualise the data against the reproducibilities from literature, Gauss plots were made, using the sorted data for one determination (see appendix 1). On the Y-axis the reported analysis results are plotted. The corresponding laboratory numbers are under the X-axis. The straight horizontal line presents the consensus value (a trimmed mean). The four striped lines, parallel to the consensus value line, are the +3s, +2s, -2s and -3s target reproducibility limits of the selected standard. Outliers and other data, which were excluded from the calculations, are represented as a cross. Accepted data are represented as a triangle. Furthermore, Kernel Density Graphs were made. This is a method for producing a smooth density approximation to a set of data that avoids some problems associated with histograms (see appendix 4, nos.17-18).

3.3 Z-SCORES

To evaluate the performance of the participating laboratories the z-scores were calculated. As it was decided to evaluate the performance of the participants in this proficiency test (PT) against the literature requirements, e.g. the EN14372 reproducibilities, the z-scores were calculated using a target standard deviation. This results in an evaluation independent of the spread of this interlaboratory study. The target standard deviation was calculated from the literature reproducibility by division with 2.8.

The z-scores were calculated according to:

$$z_{(\text{target})} = (\text{result} - \text{average of PT}) / \text{target standard deviation}$$

Absolute values for $z < 2$ are very common and absolute values for $z > 3$ are very rare. The usual interpretation of z-scores is as follows:

| | |
|---------------|----------------|
| $ z < 1$ | good |
| $1 < z < 2$ | satisfactory |
| $2 < z < 3$ | questionable |
| $3 < z $ | unsatisfactory |

4 EVALUATION

In this interlaboratory study no large problems were encountered during the execution. Four participants did not report any test results. Finally 120 of the 124 participating laboratories reported 1250 numerical results. Observed were 103 statistically outlying test results, which is 8.2% of all results. In proficiency studies outlier percentages of 3% - 7.5% are quite normal.

4.1 EVALUATION PER PHTHALATE/SAMPLE

In this section the results are discussed per component.

Many different test methods were used by the participating laboratories. Many in house methods, but also several standard test methods were used: EN14372 (Soxhlet extraction with diethyl ether) and CPSC-CH-C1001-09 (dissolution in THF). Regretfully the CPSC method does not contain any precision statements. Therefore, the requirements from the standardised method EN14372:04, "Child use and care articles, Cutlery and feeding utensils, Safety requirements and tests" were used for evaluation of the results of this interlaboratory study. Regretfully, only a relative within-laboratory standard deviation RSDr is given in EN14372:04. Multiplication of RSDr by 2.8 gives the repeatability. Multiplication of the repeatability by 3 gives a good estimate of the target reproducibility. For comparison also a target reproducibility based on the Horwitz equation is given for each phthalate.

General: Only 50 laboratories did identify both materials correctly as PVC.

The presence of a significant amount of phthalates may have hampered the identification of this material by infrared.

The effect of the phthalate releasing technique appeared to be not significant in this PT. Separate evaluation of CPSC test results (dissolution in THF) and comparison with the other reported test results did show that no significant differences are present, this in contrast with the findings in earlier PTs.

DINP: In this PT separate test results for DINP-1 and for DINP-2 were requested to be reported. This because it was found during the previous PT that test results may be different when DINP-1 is present in the sample and DINP-2 is used for the calibration. However, from the test results reported in this PT, it is clear that the effect will be negligible. The assigned values for DINP-1 and DINP-2 are not significantly different for each of the samples.

The determination of DINP was somewhat problematic at levels of 0.2-0.3 %M/M. In total 24 statistical outliers (11%) were detected. The observed reproducibilities are all larger than the estimated EN14372:04 reproducibility

BBP: The determination of BBP was somewhat problematic at the level of 0.2 %M/M. In total 23 statistical outliers (9.6%) were detected. Both observed reproducibilities are larger than the estimated EN14372:04 reproducibility.

DEHP: The determination of DEHP was somewhat problematic at levels of 0.3-0.5 %M/M. In total 20 statistical outliers (8.4%) were detected. Both observed reproducibilities are larger than the estimated EN14372:04 reproducibility.

DBP: The determination of DBP was problematic at the level of 0.2 %M/M. Only four statistical outliers (3.4%) were detected. However, the observed reproducibility is not at all in agreement with the estimated EN14372:04 reproducibility.

DIDP: In this PT separate test results for DIDP-1 and for DIDP-2 were requested to be reported. This because it was found during the previous PT that test results may be different when DIDP-1 is present in the sample and DIDP-2 is used for the

calibration. From the test results reported in this PT, it is clear that only DIDP-1 was present (in sample #11013) and no comparison with DIDP-2 could be made. The determination of DIDP-1 was somewhat problematic at the level of 0.25 %M/M. Only four statistical outliers (3.7%) were detected. However, the observed reproducibility is not at all in agreement with the estimated EN14372:04 reproducibility.

DNOP: The determination of DNOP was somewhat problematic at the level of 0.1 %M/M. Only five statistical outliers (4.3%) were detected. However, the observed reproducibility is not in agreement with the estimated EN14372:04 reproducibility.

DHP: The determination of DHP was somewhat problematic at the level of 0.1 %M/M. In total 11 statistical outliers (13.9%) were detected. The observed reproducibility is not in agreement with the estimated EN14372:04 reproducibility.

4.2 PERFORMANCE EVALUATION FOR THE GROUP OF LABORATORIES

A comparison has been made between the reproducibilities as found for the group of participating laboratories and the reproducibilities of EN14372:2004 (R_{target}) in the next tables:

| Parameter | Unit | n | Average | $2.8 * sd$ | R (target) |
|-----------|------|-----|---------|------------|--------------|
| DINP-1 | %M/M | 56 | 0.27 | 0.09 | 0.07 |
| DINP-2 | %M/M | 50 | 0.28 | 0.12 | 0.07 |
| BBP | %M/M | 108 | 0.19 | 0.07 | 0.05 |
| DEHP | %M/M | 110 | 0.46 | 0.16 | 0.12 |

Table 4: overview of results for sample #11012

| Parameter | Unit | n | Average | $2.8 * sd$ | R (target) |
|-----------|------|-----|---------|------------|--------------|
| DINP-1 | %M/M | 55 | 0.18 | 0.09 | 0.05 |
| DINP-2 | %M/M | 45 | 0.19 | 0.06 | 0.05 |
| DBP | %M/M | 115 | 0.17 | 0.08 | 0.04 |
| BBP | %M/M | 108 | 0.14 | 0.06 | 0.04 |
| DIDP-1 | %M/M | 104 | 0.25 | 0.11 | 0.06 |
| DNOP | %M/M | 110 | 0.090 | 0.037 | 0.023 |
| DEHP | %M/M | 109 | 0.27 | 0.09 | 0.07 |
| DHP | %M/M | 68 | 0.10 | 0.03 | 0.02 |

Table 5: overview of results for sample #11013

4.3 COMPARISON WITH PREVIOUS INTERLABORATORY STUDIES

| | February 2011 | February 2010 | February 2009 | February 2008 |
|----------------------------|---------------|---------------|---------------|---------------|
| Number of reporting labs | 120 | 134 | 102 | 78 |
| Number of results reported | 1250 | 767 | 797 | 760 |
| Statistical outliers | 103 | 59 | 33 | 25 |
| Percentage outliers | 8.2% | 7.7% | 4.1% | 3.3% |

Table 6: comparison with previous proficiency tests

In proficiency tests, outlier percentages of 3% - 7.5% are quite normal.

In comparison with previous proficiency tests, significant improvements are observed for the evaluated components, see below table. From 2008 - 2010 significant differences between the EN14372 results and the results from THF dissolution were observed. In the current PT this was no longer the case.

| R (%rel.) | February 2011 | February 2010 | February 2009 | February 2008 | February 2007 |
|-----------|---------------|------------------------------------|------------------------------------|-----------------------------------|---------------|
| DINP | 33 - 47 | 42 ^T - 167 ^E | -- | 69 ^T - 72 ^E | 104 |
| DBP | 48 | 39 | 52 ^T - 61 ^E | 42 ^E - 82 ^T | -- |
| DEHP | 34 - 36 | 21 ^T - 153 ^E | 46 ^E - 54 ^T | 29 ^T - 54 ^E | 53 - 59 |
| BBP | 37 - 42 | 39 | 58 ^E - 127 ^T | 64 ^E - 79 ^T | -- |
| DIDP | 43 | -- | -- | 39 ^T - 51 ^E | -- |
| DNOP | 41 | -- | -- | -- | -- |
| DHP | 30 | -- | -- | -- | -- |

Table 7: Relative reproducibilities of detected phthalates in this PT and the former PTs (E=EN14372; T=THF dissolution)

5 DISCUSSION

As remarked above significant differences were observed between EN14372 results and results from THF dissolution in the PTs in 2008, 2009 and 2010. This was caused by the significant differences in recovery between the two extraction methods. The recovery of the THF dissolution method will be close to 100%, while the recovery of the Soxhlet extraction with diethyl ether (EN14372) will strongly depend on the grain size of the sample and the extraction time.

Obviously the laboratories participating in the iis' PTs were able to improve the recovery of the EN14372 method significantly over the last years, thus reducing the difference with the THF recovery to be no longer significant and thus closing the gap with the THF-dissolution method.

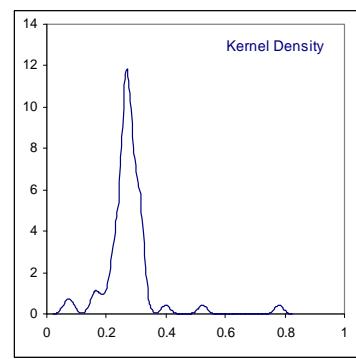

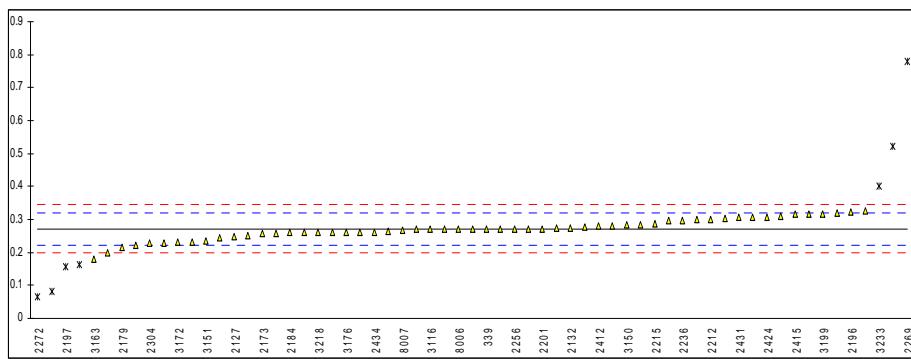

Also, it will be clear from the figures in table 5 that the overall performance of the laboratories that tested phthalates in plastics did improve significantly over the last years. The relative reproducibility for each phthalate was reduced to 35-40%, which means that the interlaboratory standard deviation will be approx. 14% relative. This is still large in comparison with the estimate from the Horwitz equation, and therefore further improvement is still to be expected.

Each laboratory has to evaluate its performance in this study and make decisions about necessary and/or possible corrective actions.

APPENDIX 1**Determination of DINP-1 on sample #11012; results in %M/M**

APPENDIX 2**Method information**

| Lab | Type(s) of plastic identified | Identification Technique | Extraction Technique | Solvent used |
|------|-------------------------------|--------------------------|----------------------|---------------------|
| 310 | no | not performed | overnight | THF |
| 330 | | | Soxhlet | chloroform/methanol |
| 339 | | | | |
| 357 | no | | Soxhlet | DEE |
| 2102 | PVC | FTIR | ultrasonic | THF |
| 2104 | | | shaking at RT | dichloromethane |
| 2115 | | | | |
| 2127 | | | shaking at RT | Ethyl Acetate |
| 2129 | | | ultrasonic | THF |
| 2132 | PVC | FTIR | | THF |
| 2135 | | | Soxhlet | hexane |
| 2146 | | | Soxhlet | DEE |
| 2152 | PVC | FTIR | | THF |
| 2156 | PVC | FTIR | Soxhlet | dichloromethane |
| 2165 | no | | heating block | organic solvent |
| 2172 | PVC | FTIR | ultrasonic | THF |
| 2173 | PVC | FTIR | | THF |
| 2179 | PVC | FTIR | Soxhlet | toluene |
| 2182 | | | ultrasonic | THF |
| 2184 | no | | ultrasonic | MTBE/acetone |
| 2190 | PVC | FTIR | ASE | none |
| 2196 | | | ultrasonic | hexane |
| 2197 | PVC | Beilstein | | THF |
| 2201 | PVC | FTIR | | THF |
| 2212 | | | | THF |
| 2215 | PVC | FTIR | ultrasonic | THF |
| 2216 | PVC | FTIR | | THF |
| 2225 | no | | ultrasonic | THF |
| 2226 | | | Microwave | THF |
| 2227 | | | | |
| 2229 | | | ultrasonic | chloroform |
| 2234 | | | Soxhlet | DEE |
| 2236 | | | ultrasonic | THF |
| 2237 | | | ultrasonic | DMF/toluene |
| 2238 | PVC | FTIR | shaking at RT | THF |
| 2240 | | | ultrasonic | THF |
| 2242 | | | | THF |
| 2246 | | | Soxhlet | chloroform/methanol |
| 2247 | PVC | FTIR | Soxhlet | DEE |
| 2253 | PVC | FTIR | | THF |
| 2255 | | | ultrasonic | THF |
| 2256 | PVC | FTIR | Soxhlet | DEE |
| 2258 | no | | ultrasonic | Acetonitril/THF |
| 2260 | | | | |
| 2266 | PVC/PVA | FTIR | Randall extractor | hexane |
| 2268 | | | ultrasonic | THF |
| 2269 | | | Soxhlet | dichloromethane |
| 2272 | | | ultrasonic | acetone |
| 2275 | PVC | fire | shaking at RT | THF |
| 2277 | PET | GC/MS-EI+ | ultrasonic | dichloromethane |
| 2279 | | | Soxhlet | dichloromethane |
| 2284 | | | ultrasonic | THF |
| 2289 | | | | THF |
| 2290 | | | | THF |
| 2293 | PVC | Beilstein | ultrasonic | THF |
| 2295 | | | ultrasonic | chloroform |
| 2304 | PVC | FTIR | | THF |
| 2306 | | | ultrasonic | THF |
| 2307 | | | ultrasonic | THF |
| 2401 | | | | |
| 2408 | PVC | FTIR | | THF |
| 2409 | PP/PE | GC/MS | Soxhlet | DEE |
| 2410 | PVC | FTIR | | THF |
| 2412 | PVC | | Soxhlet | dichloromethane |

| 3176 | PVC | FTIR | ultrasonic |
| 3180 | | ultrasonic | THF |
| 3182 | | | THF |
| 3185 | | | THF |
| 3190 | PVC | FTIR | shaking at RT |
| 3192 | PVC | FTIR | ultrasonic |
| 3197 | PVC | FTIR | ultrasonic |
| 3199 | | ultrasonic | acetonitril/THF |
| 3208 | | 80°C | methanol |
| 3210 | | ultrasonic | acetone/hexane |
| 3213 | | ultrasonic | acetonitril/THF |
| 3218 | PVC | FTIR | ultrasonic |
| 3220 | | FTIR | ultrasonic |
| 3225 | | ultrasonic | chloroform |
| 3226 | PVC | FTIR | ultrasonic |
| 3233 | | ultrasonic | acetone/hexane |
| 3237 | | ultrasonic | acetonitril/THF |
| 3238 | PVC | with copper | |
| 3239 | PVC/PVA | FTIR | Soxhlet |
| 3242 | PVC | FTIR | Soxhlet |
| 3243 | PVC | ATR | ultrasonic |
| 3248 | PVC | FTIR | ultrasonic |
| 8005 | PVC | FTIR | Soxhlet |
| 8006 | PVC | FTIR | Soxhlet |
| 8007 | PVC | FTIR | shaking at RT |

APPENDIX 3**Number of participating laboratories per country**

1 lab in AUSTRIA
2 labs in BANGLADESH
1 lab in CANADA
1 lab in CROATIA
1 lab in DENMARK
2 labs in FINLAND
7 labs in FRANCE
11 labs in GERMANY
1 lab in GREECE
2 labs in GUATEMALA
17 labs in HONG KONG
3 labs in INDIA
1 lab in INDONESIA
3 labs in ITALY
1 lab in JAPAN
3 labs in KOREA
1 lab in MALAYSIA
2 labs in MEXICO
36 labs in P.R. of CHINA
1 lab in SERBIA
1 lab in SINGAPORE
2 labs in SPAIN
1 lab in SWITZERLAND
4 labs in THAILAND
3 labs in THE NETHERLANDS
4 labs in TURKEY
9 labs in U.S.A.
1 lab in UNITED KINGDOM
2 labs in VIETNAM

APPENDIX 4**Abbreviations:**

| | |
|----------|--|
| C | = final result after checking of first reported suspect result |
| D(0.01) | = outlier in Dixon's outlier test |
| D(0.05) | = straggler in Dixon's outlier test |
| G(0.01) | = outlier in Grubbs' outlier test |
| G(0.05) | = straggler in Grubbs' outlier test |
| DG(0.01) | = outlier in Double Grubbs' outlier test |
| DG(0.05) | = straggler in Double Grubbs' outlier test |
| n.a. | = not applicable |
| n.d. | = not detected |
| fr | = first reported result |
